Real-frequency self-energy (preliminary continuation)
$\beta t = 25$, per-spin $tA(\omega)$; finite broadening $\eta/t = 0.15$
(a) $U/t = 8$, $\langle n \rangle = 0.7002$
(b) $U/t = 8$, $\langle n \rangle = 0.8995$
(c) $U/t = 10$, $\langle n \rangle = 0.6996$
(d) $U/t = 10$, $\langle n \rangle = 0.9002$
$\mathrm{Re}\,\Sigma^R/t$
$\mathrm{Im}\,\Sigma^R/t$
$\Sigma^R(\omega)/t$
