$G(i\omega_n)$ — Low-frequency detail: $|\omega_n|/t \leq 12$
$\beta t = 25$, $t = 0.25\,\mathrm{eV}$, $T \simeq 116.05\,\mathrm{K}$
Re G
Im G
(a) $U/t = 8$, $\langle n \rangle = 0.7002$
(b) $U/t = 8$, $\langle n \rangle = 0.8995$
(c) $U/t = 10$, $\langle n \rangle = 0.6996$
(d) $U/t = 10$, $\langle n \rangle = 0.9002$
Re, Im $[tG(i\omega_n)]$
ω_n/t
