$G(i\omega_n)$ using the 256 positive Matsubara frequencies
$\beta t = 25$, $t = 0.25\,\mathrm{eV}$, $T \approx 116.05\,\mathrm{K}$
$\mathrm{Re}[\,tG(i\omega_n)\,]$
$\mathrm{Im}[\,tG(i\omega_n)\,]$
(a) $U/t = 8$, $\langle n \rangle = 0.7002$
(b) $U/t = 8$, $\langle n \rangle = 0.8995$
(c) $U/t = 10$, $\langle n \rangle = 0.6996$
(d) $U/t = 10$, $\langle n \rangle = 0.9002$
$tG(i\omega_n)$
$\omega_n/t$
