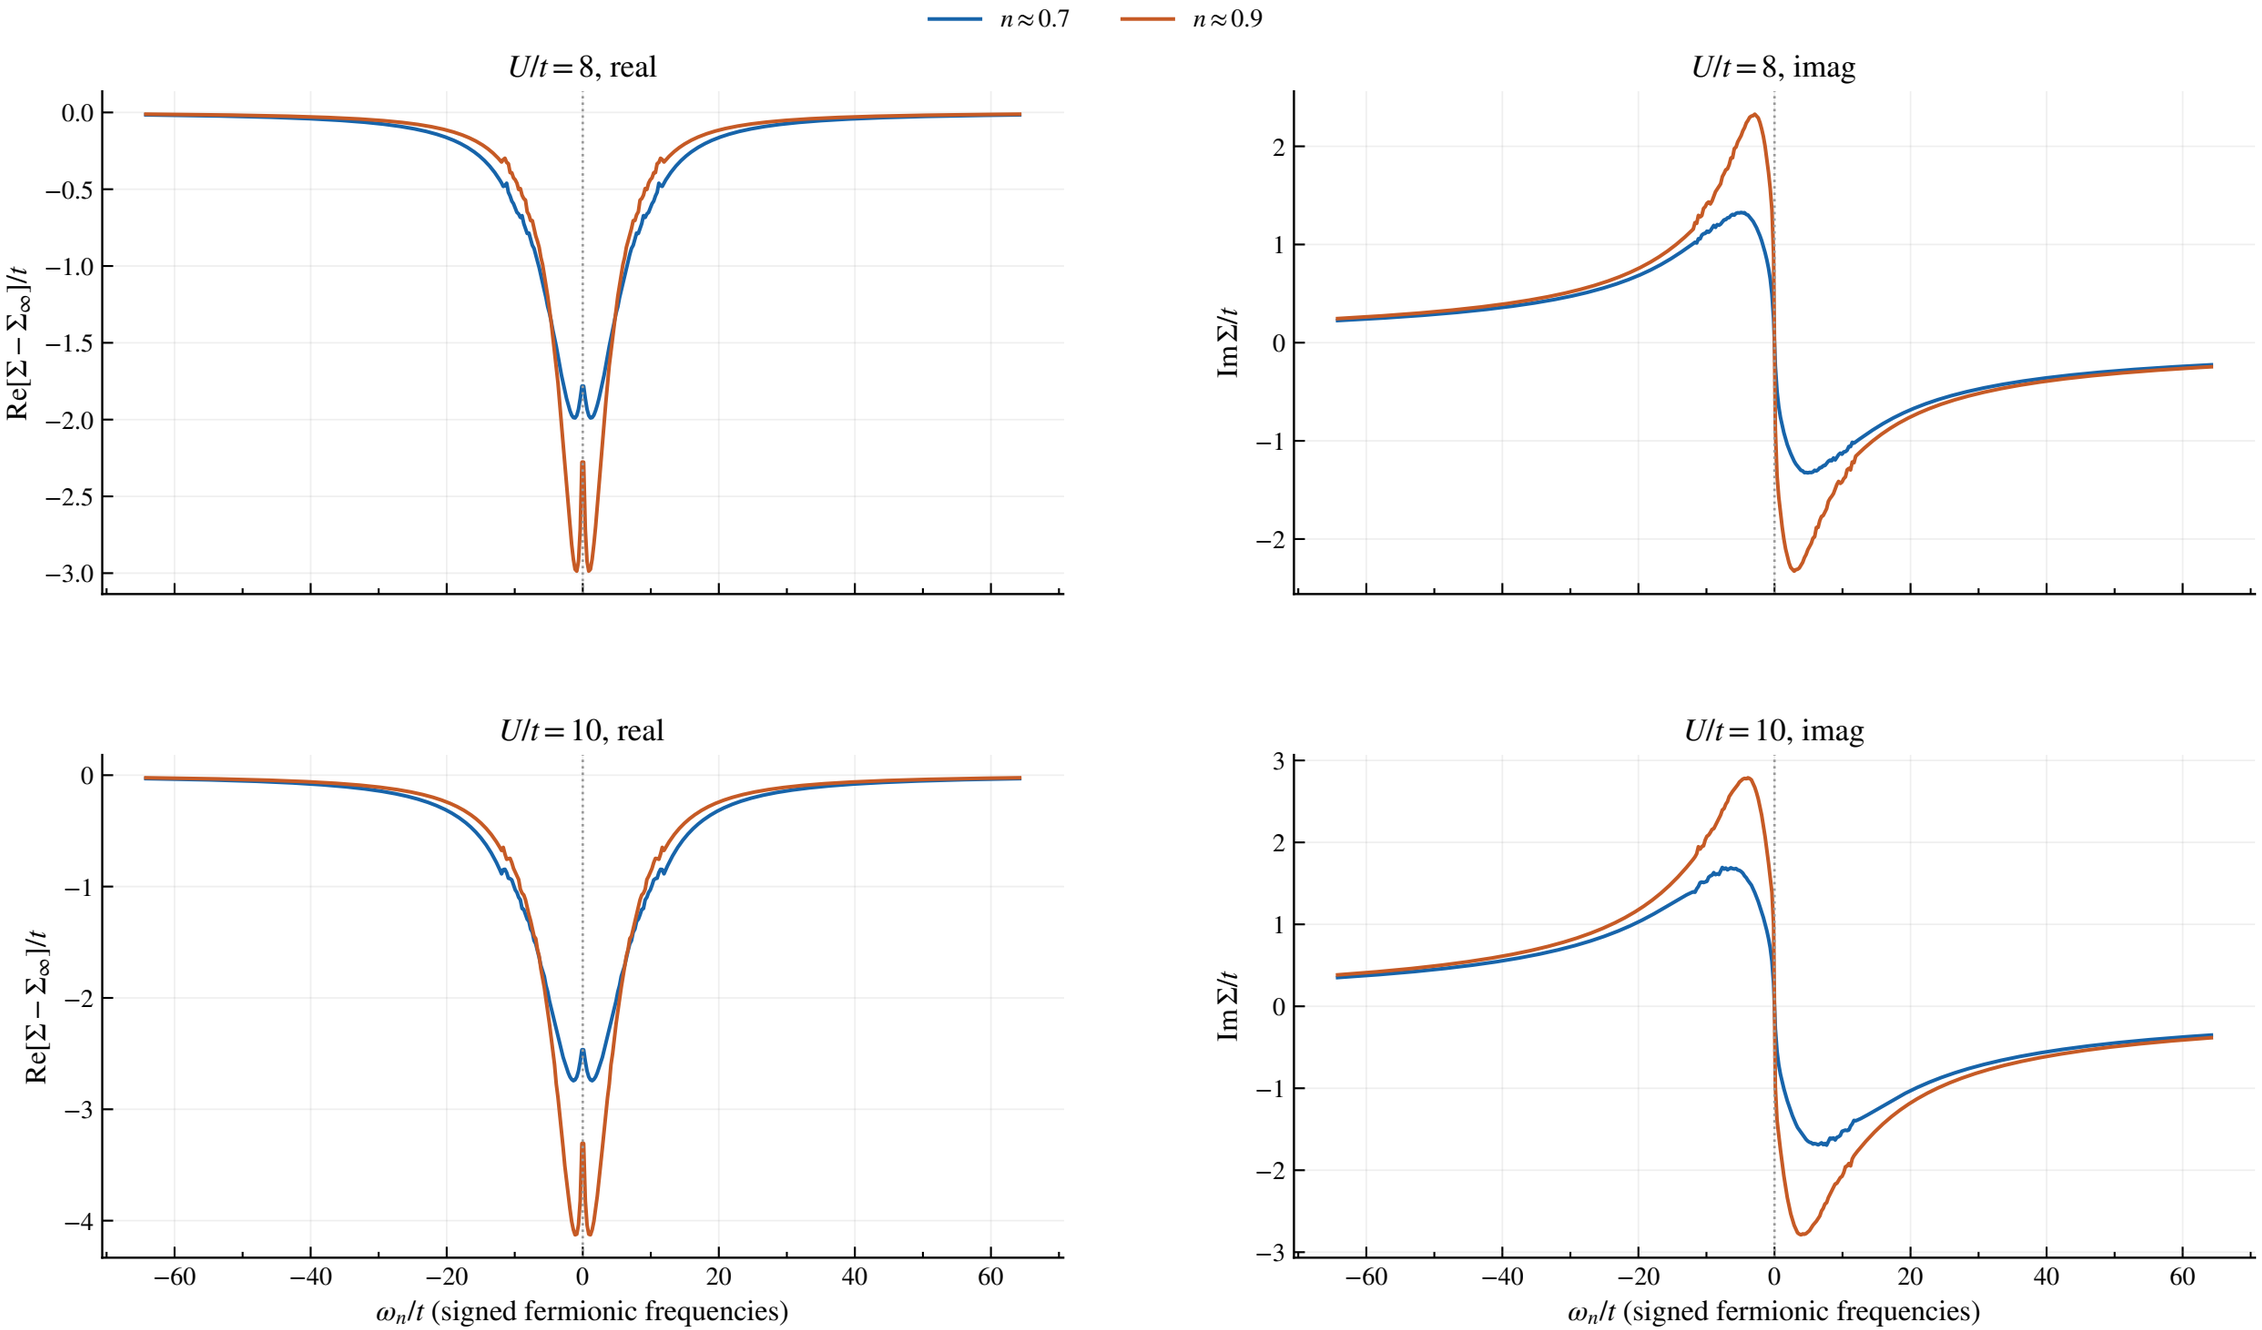
Self-energy over the full signed 512-point Matsubara mesh

Paramagnetic Bethe lattice • $\beta t = 25$ • $t = 0.25\,\mathrm{eV}$ • $T = 116.05\,\mathrm{K}$ • CT-HYB / DMFT



Negative-frequency data reconstructed via $\Sigma(-i\omega_n) = \Sigma(i\omega_n)^*$; not additional independent QMC samples.
