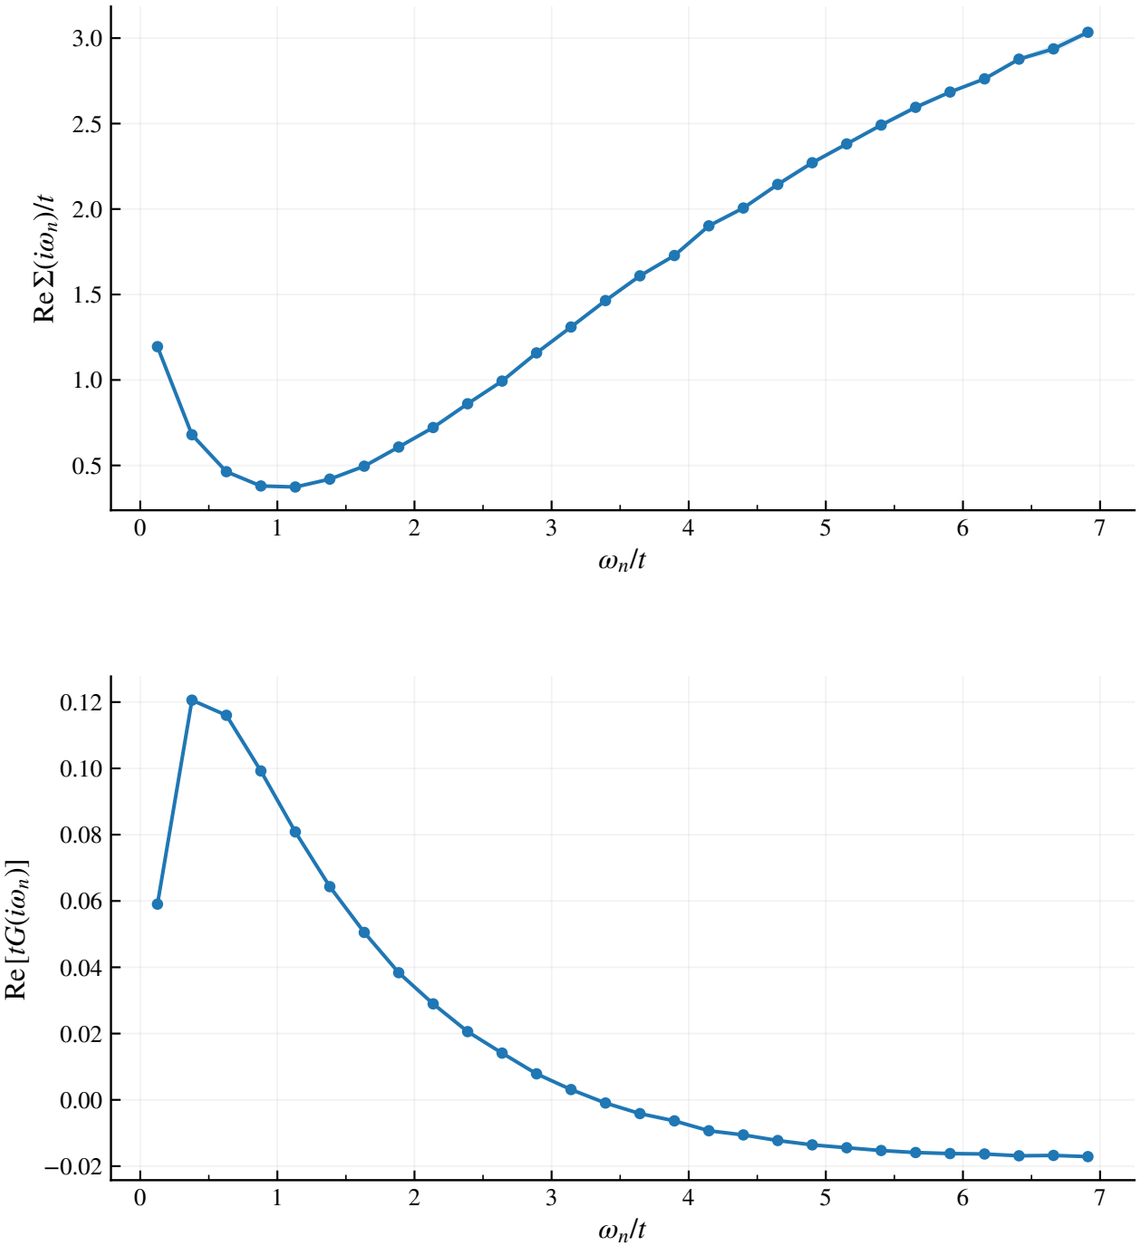
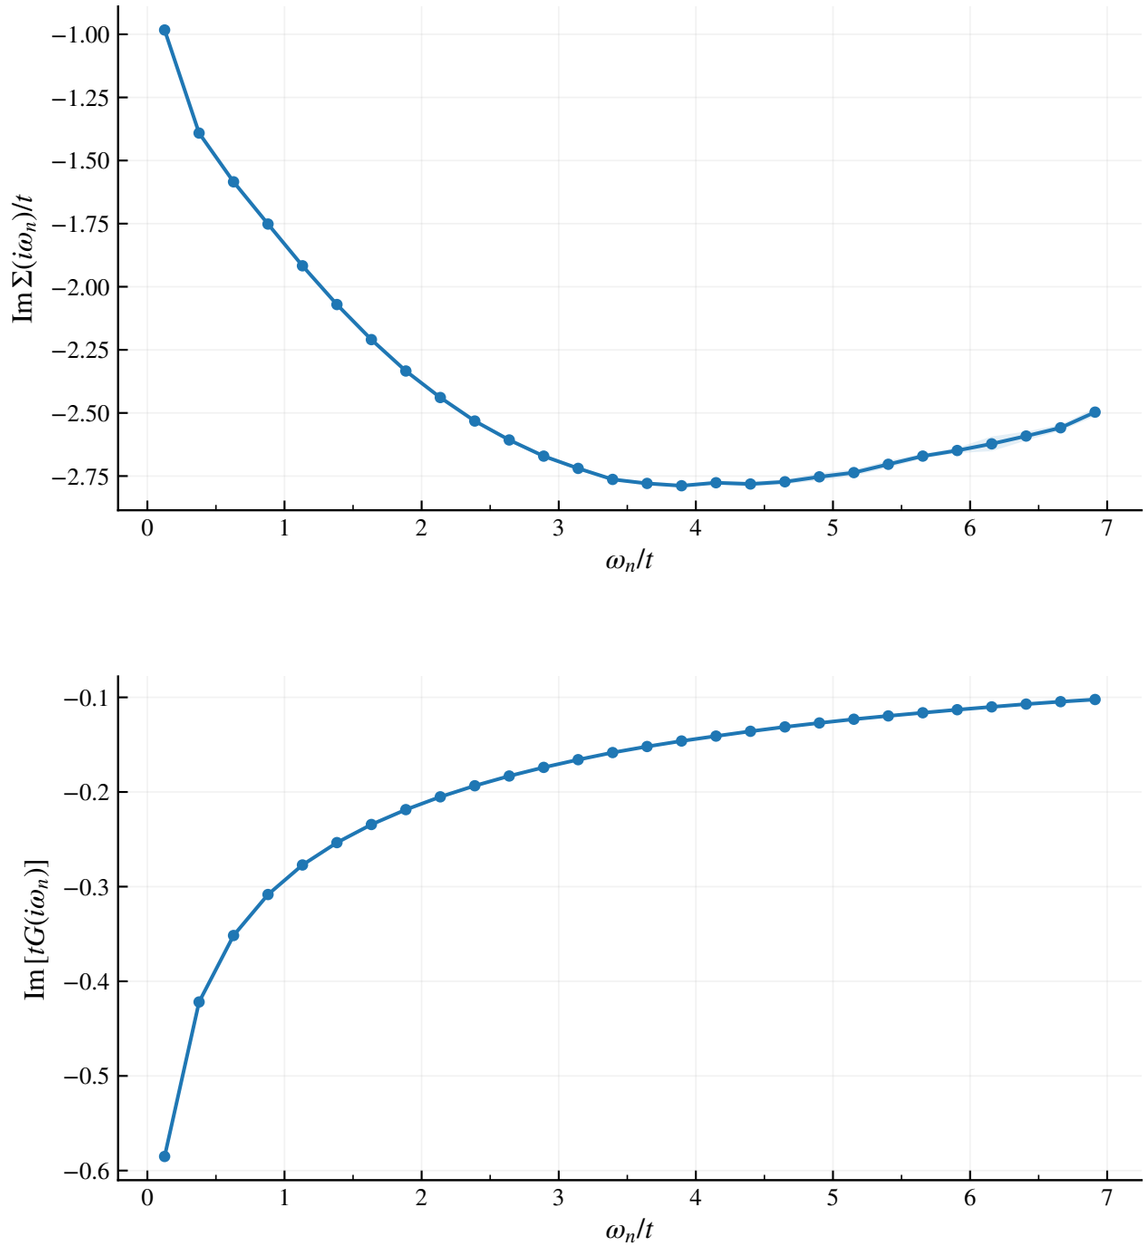
Low-frequency detail | first 28 positive points

$U/t = 10.0$ · $\beta t = 25.0$ · $t = 0.25\,\mathrm{eV}$ · $T = 116.05\,\mathrm{K}$

$\langle n \rangle = 0.900234$ (target 0.9000) · $\mu/t = 1.425400$ · $D = 0.00571$ · $R_\Delta = 0.000704$

$\langle \mathrm{sign} \rangle = 1.000$ · $\tau_{\mathrm{auto}} = 1.36$ cycles · 6 final replicas · Quality: PASS





Low-frequency quantities are especially relevant for metallicity and quasiparticle diagnostics.
