Full imaginary-time grid | 2049 time points

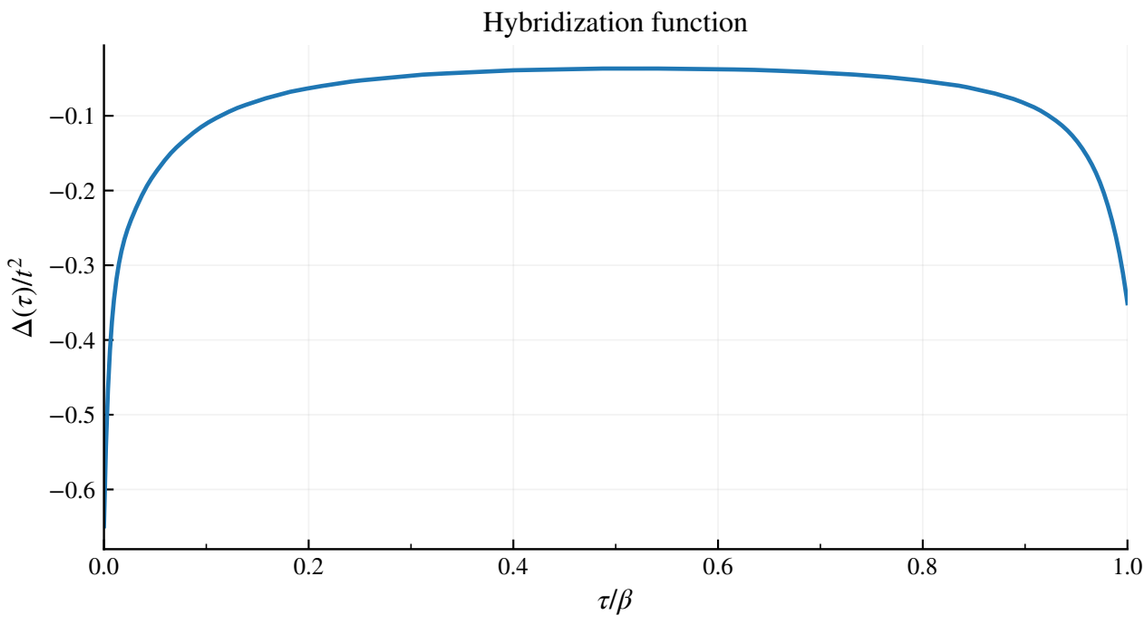

$U/t = 8.0$ · $\beta t = 25.0$ · $t = 0.25\,\mathrm{eV}$ · $T = 116.05\,\mathrm{K}$

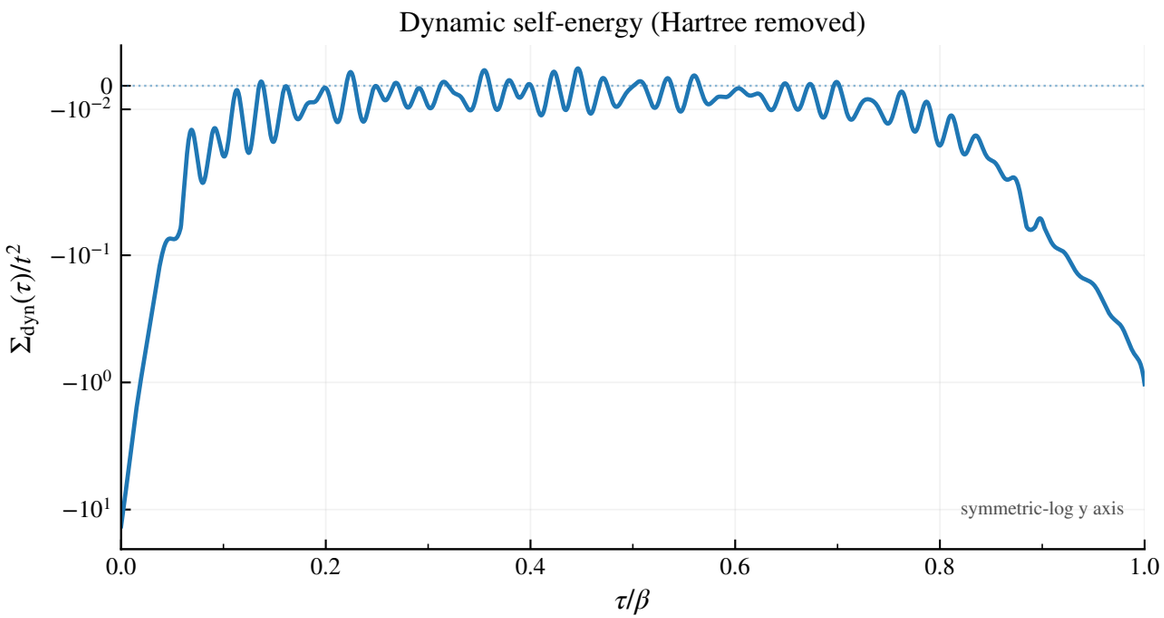

$\langle n \rangle = 0.700248$ (target 0.7000) · $\mu/t = 0.570600$ · $D = 0.00738$ · $R_\Delta = 0.000377$

$\langle \mathrm{sign} \rangle = 1.000$ · $\tau_{\mathrm{auto}} = 0.93$ cycles · 6 final replicas · Quality: PASS

$\Sigma_{\mathrm{dyn}}(\tau)$ excludes the instantaneous Hartree term; it is not the full self-energy.
