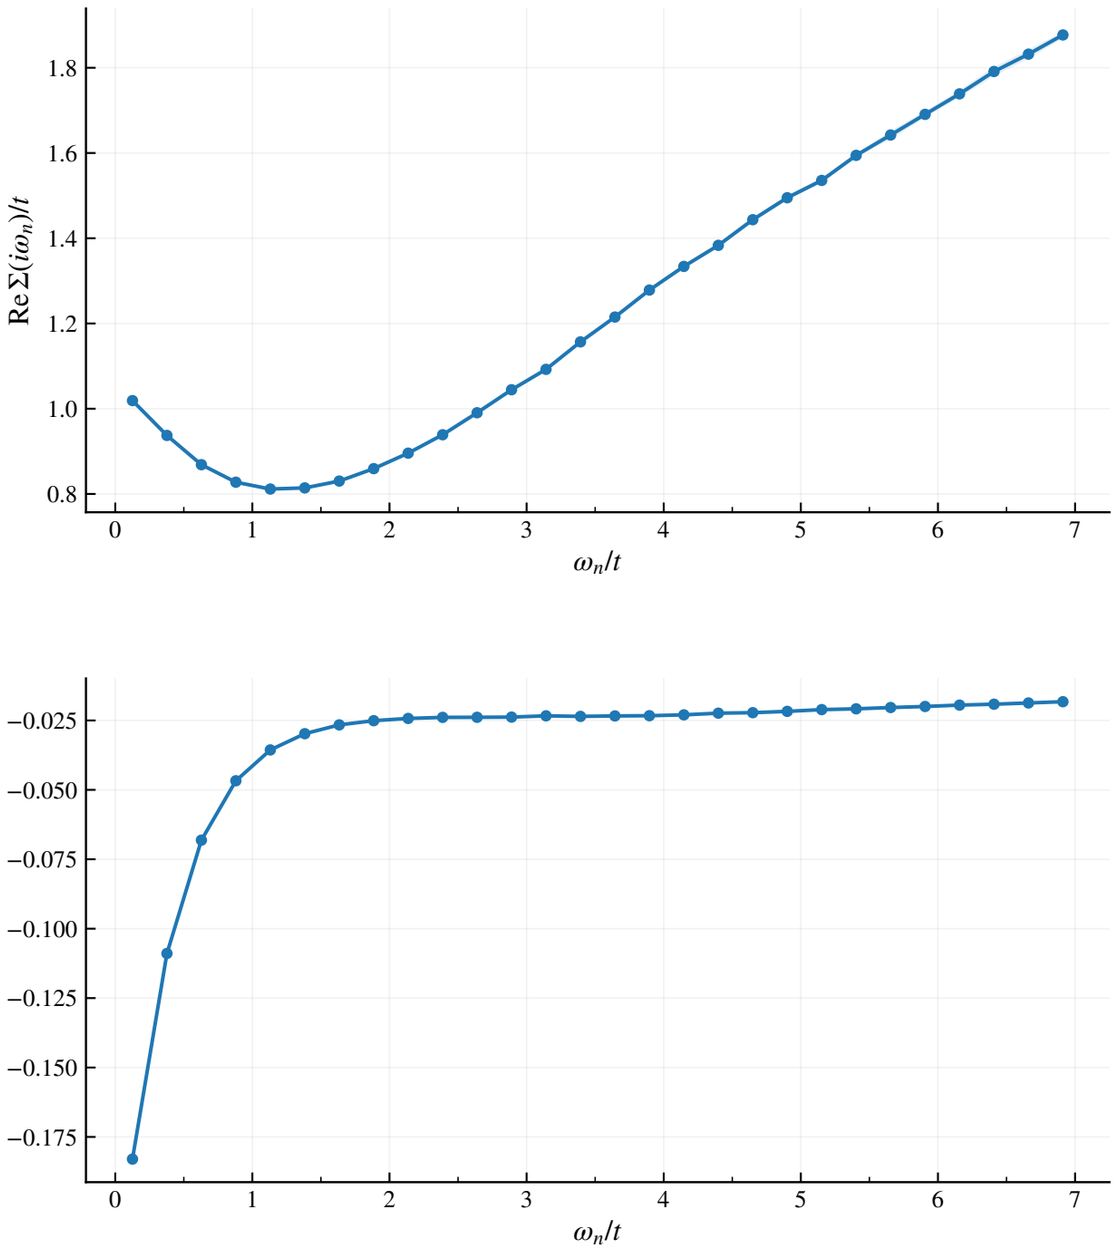
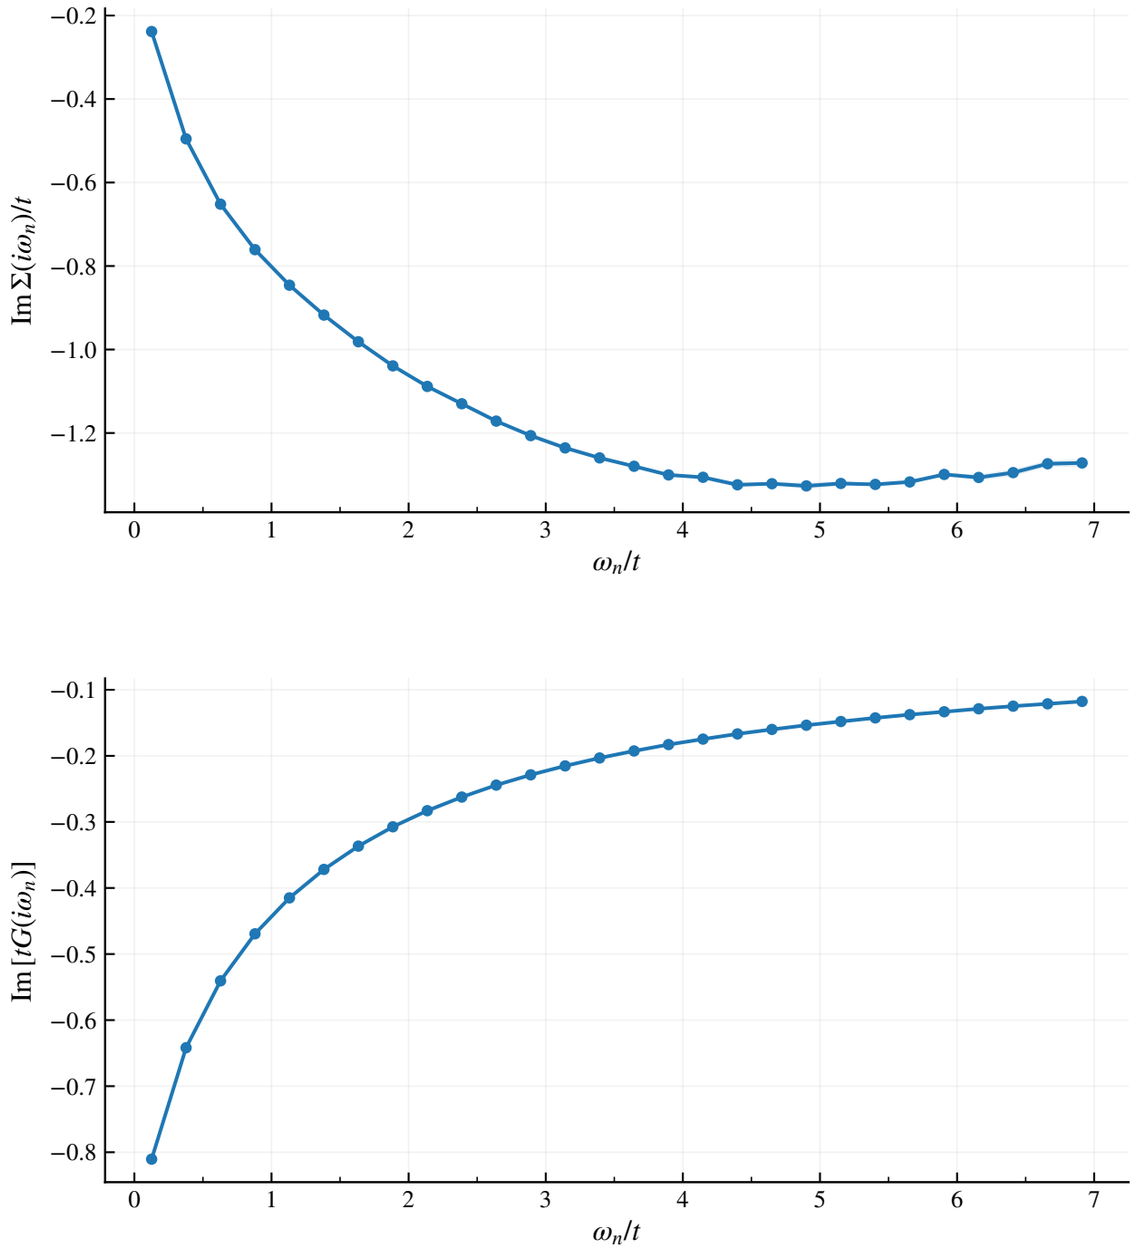
Low-frequency detail | first 28 positive points

$U/t = 8.0$ · $\beta t = 25.0$ · $t = 0.25\,\mathrm{eV}$ · $T = 116.05\,\mathrm{K}$

$\langle n \rangle = 0.700248$ (target 0.7000) · $\mu/t = 0.570600$ · $D = 0.00738$ · $R_\Delta = 0.000377$

$\langle \mathrm{sign} \rangle = 1.000$ · $\tau_{\mathrm{auto}} = 0.93$ cycles · 6 final replicas · Quality: PASS





Low-frequency quantities are especially relevant for metallicity and quasiparticle diagnostics.
